FOR TOWNSHIP USE ONLY

APPLICATION FEE	
$100.00 PER _____ WELL(S) **$_____**	**Date Received:** _____
TOTAL **$_____**	**Received by:** _____

** The minimum acceptable well recovery rate for Certification of Well is one half (0.5) gpm averaged over the first 30 minutes of recovery. If the well fails to achieve this, the test shall be repeated to ensure that all steps were undertaken correctly. If it fails a second time, the well should be deepened or re-drilled at a different location. Deepening the well may result in encountering additional water-bearing fractures. Generally, if the well depth exceeds 500 feet, the chances on encountering additional water-bearing fractures are minimal. If a replacement well is drilled and fails to pass this test, it may be possible to use both wells in combination to meet the expected demand if the well-recovery rate of both wells together exceeds 0.5 gpm. A well which fails to achieve this recovery rate due to drawdown of less than 5 feet during the pumping phase shall be deemed acceptable.
